See Value From Your Data Sooner, Always

Dashboard OPS Services

3i Infotech
LIMITLESS EXCELLENCE

Does your business have complex data but no way to obtain actionable insights? Do you understand the data, but have no way to see how you are performing against your objectives? A dashboard is the perfect solution as it is a smart business intelligence tool which displays data visualizations that you can understand instantly. It offers an objective view of the key performance metrics and serve effective insights. Are you facing these data visualization challenges?

Are you also facing these Challenges?

→Absence of insightful reports which baffle the users and make it impossible to compare figures, spot trends, and gain insights

→Overloaded reports and dashboards which are stuffed with excessive visual elements, colors, and data visualization types

→Disregard of user roles which has an impact on the relevance and usability of data delivered to the dashboard users

→Unanswered questions and lack of drill-down and filtering options for users looking for in-depth analysis of the voluminous business data

→Insufficient flexibility with dashboards being confined only to desktop versions rather than also being available for mobile user

Some Facts

• 90% of the information transmitted to the brain is visual

• The human brain can process an image in just 13 milliseconds

• 50% of the brain is active in visual processing

• High quality infographics are 30x more likely to be read than plain text

• 48% of these managers can find the data they need without the help of I.T. staff

• The Wharton School of Business study found that the use of data visualizations could shorten business meeting by 24%

• Managers in organizations with visual data recovery tools are 28% more likely to find timely information than those who rely on managed reporting and dashboards

• People who follow directions with illustrations do 323% better than those who follow text-only directions

Asking the right questions and then gathering, organizing, and presenting data to make informed decisions is not a trivial task. The ability to clearly see how you're performing compared to goals and objectives, prior year performance, competitors, or industry standards enables you to make sound decisions and follow up with more questions that will help your organization Evolve. We can help transforming your company's data into dashboards which will result in the ability to:

• Quickly identify performance towards goals and objective

• Clearly point out that something deserves attention

• Pinpoint what action needs to be taken

• Make unexpected discoveries

• Build informed decisions based on facts

• Improve your company performance

Data turns into Information – We deliver individual dashboards for people, teams, and functions within the company which are made available on all platforms.

MOMENTA
LEVERAGE INSIGHTS | DRIVE GROWTH

In order to use data correctly, they must be brought into context. Through professional data visualization and with flexible dashboards and reports, findings insights that represent the cause-and-effect relationship and trends of user behaviour. We help deliver dashboards and reports for users and teams which are generated automatically through data interfaces and made available for analysis and decision making.

Through data visualization, trends become visible – Our dashboards provides extensive analyses and recommended actions, so that data becomes information which can be used to optimize business actions.
