FRAMEWORK

Zeus

Mobility Configuration Framework

3i Infotech's Mobility framework – Zeus, is a configuration framework, which dramatically transforms the way your distribution channels and customers interact with you

Zeus is an enabler not only for your distribution channels and employees, but also your end customers.

Comprising of features of **Policy View, Quote Generation, Sell Policy, Business Tracking, Renewals Reminders** and **Client Communication** for **Distribution Channels**, this application covers the entire policy life cycle existing for processes of General Insurance. Add to this, the capability for an **end customer** to be able to **buy his own policy, track his status, renew** and **connect back to the organization**, makes Zeus a fully integrated

mobile application framework, servicing the complete need for Insurance industry.

Zeus is a one of it's kind application, built on such a framework, that sets it apart for the unparalleled flexibility and robustness that it brings to the table.

Allowing for a seamless integration with your existing enterprise infrastructure, Zeus brings with itself plug-ins to integrate with your **Policy Admin System, CRM, HRMS, LMS** and **Social Media**.

A **Command Center** available with Zeus enables your *business* team to complete application configuration using a rich Guided User Interface without any need of technical assistance. This command center also provides **Reverse-MDM**, specifically designed to address needs of **BYOD**.

Reverse MDM: Mobile Device Management for BYOD

Along with the rich features on mobile, Zeus framework also helps you in addressing the security challenges that comes with BYOD and enterprise application extension to Mobile devices.

Reverse MDM, as a part of Command Center will help you in securing the information that is in transit and stored on mobile devices, without the need of any enterprise Mobile Device Management Solution.

Reverse MDM enables you to

- Remotely control the behavior of the application for all categories of users
- Block the application access of the end user remotely
- Remotely Wipe out application specific data from the device
- Check end user demographics
- Deploy strong Registration process

Secure Communication Channel:

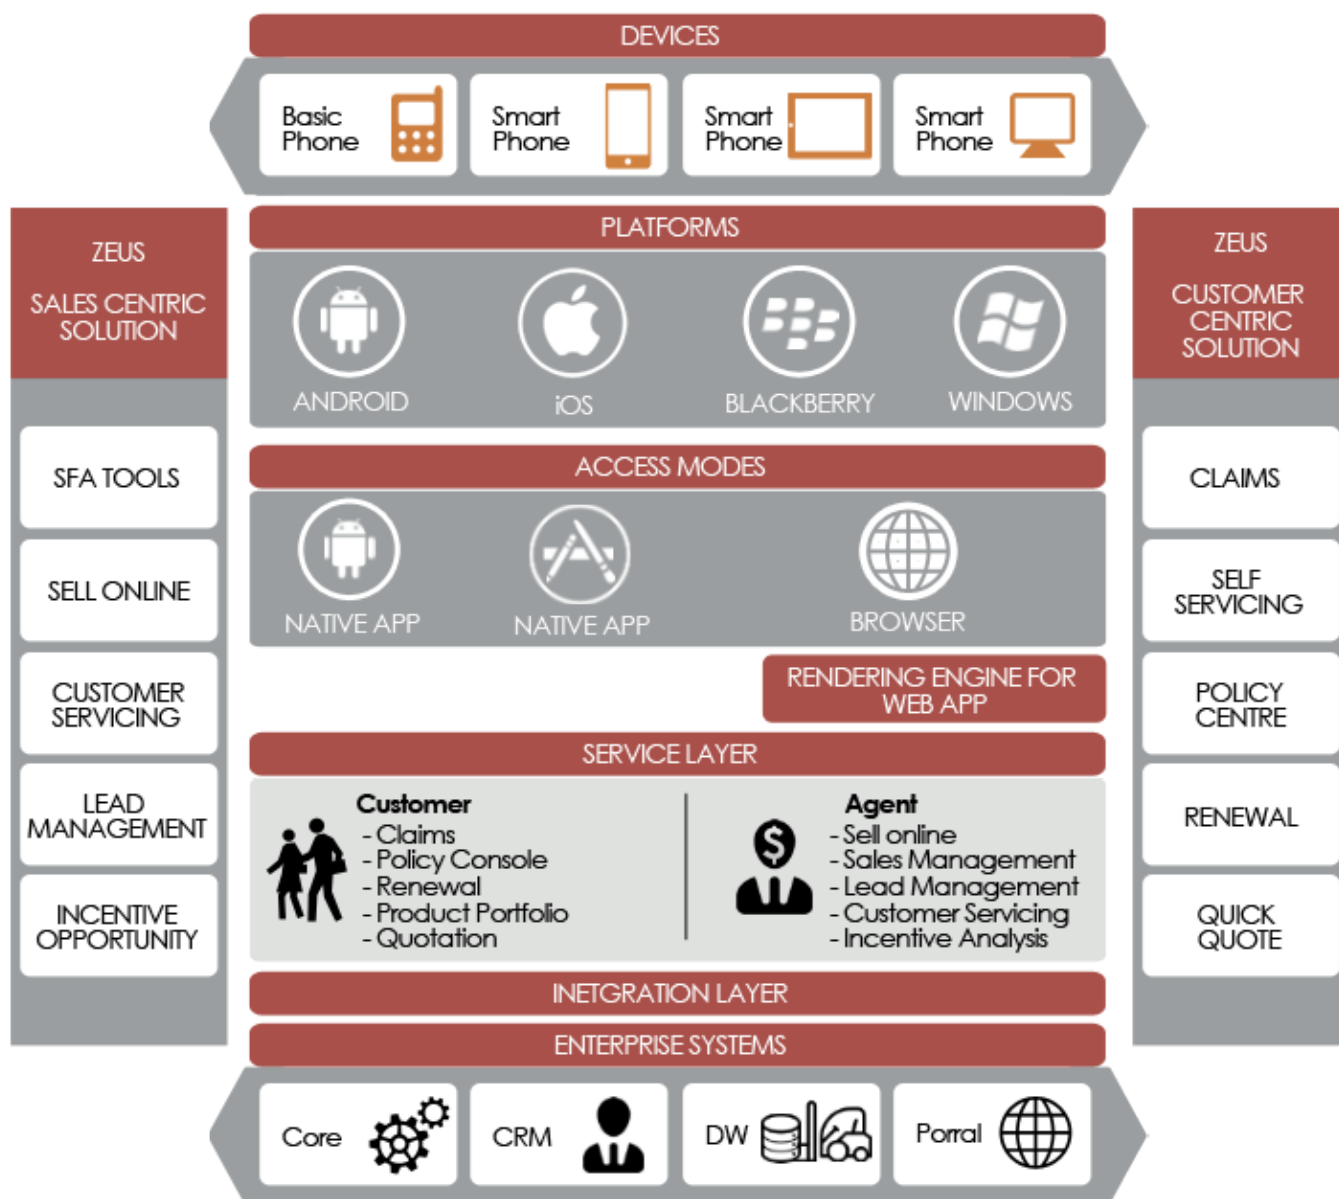

- Encrypted communication using Triple DES 128
- Communication channel encrypted using SSL 2048
- Three Factor Authentication mechanism
- Local storage of data in encrypted form on device

Two Factor Authentication / Authorization:

- OTP based two factor authentication for your distribution channels
- Two factor authorization before every transaction
